

PPGIS changed the future

The Helsinki of the future

It is easy to get around in the Helsinki of the future, and transverse transport also flows smoothly. Draw the routes on the map where we need a new or better connection:

Public transport connection

Cycling connection

Walking connection

Car transport connection

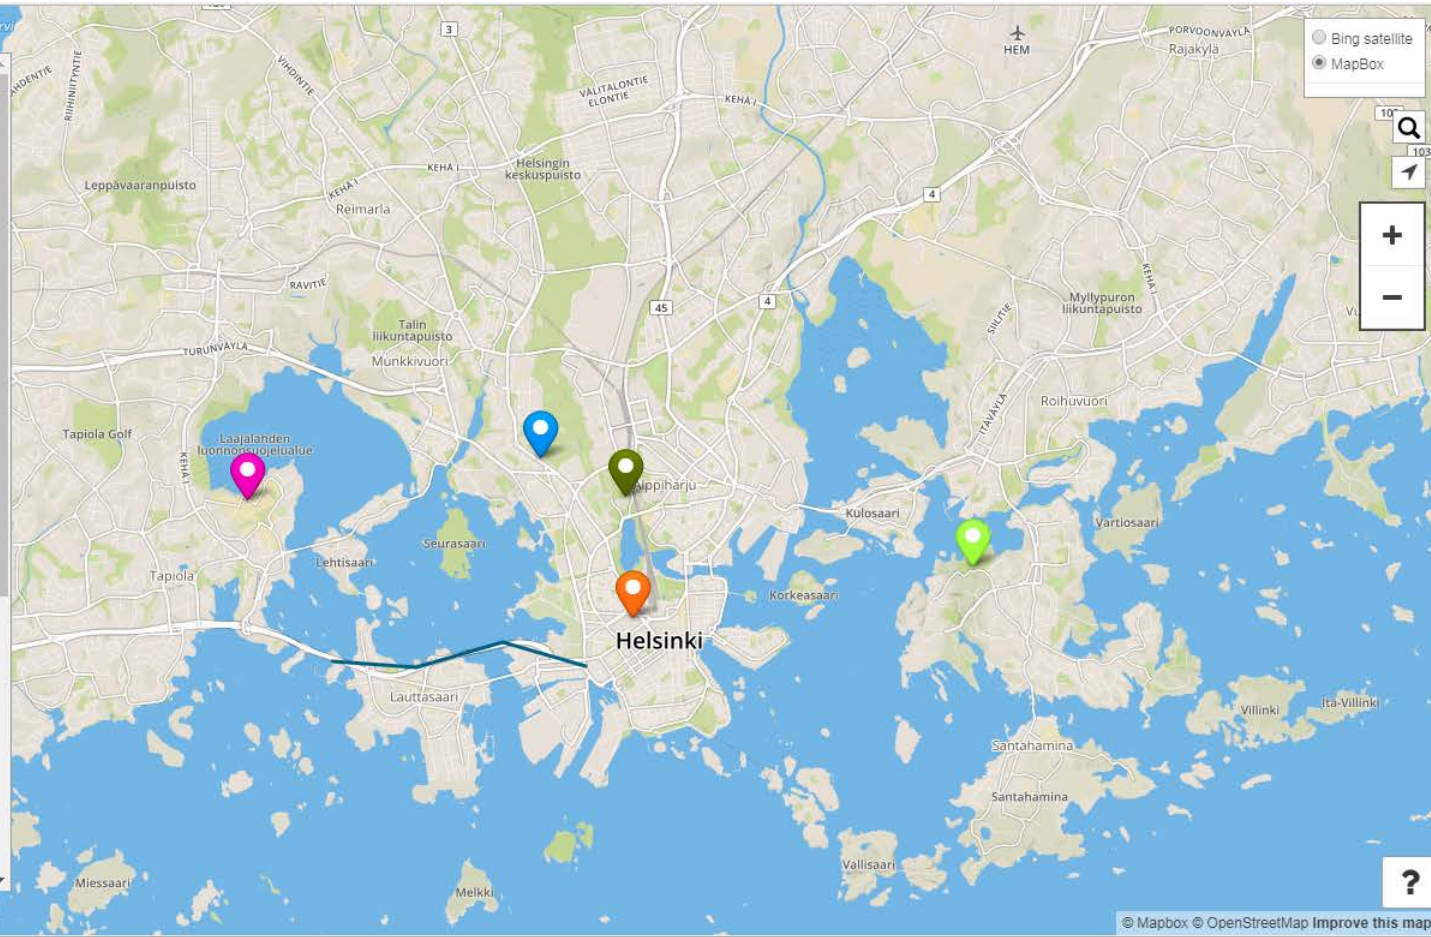

Pedestrians have a special status in the Helsinki of the future and streets are common spaces for city-dwellers. Tag the places on the map that you feel need changing:

There should be a pedestrian street here

There should be more shops and services here on the street-level floors of the buildings

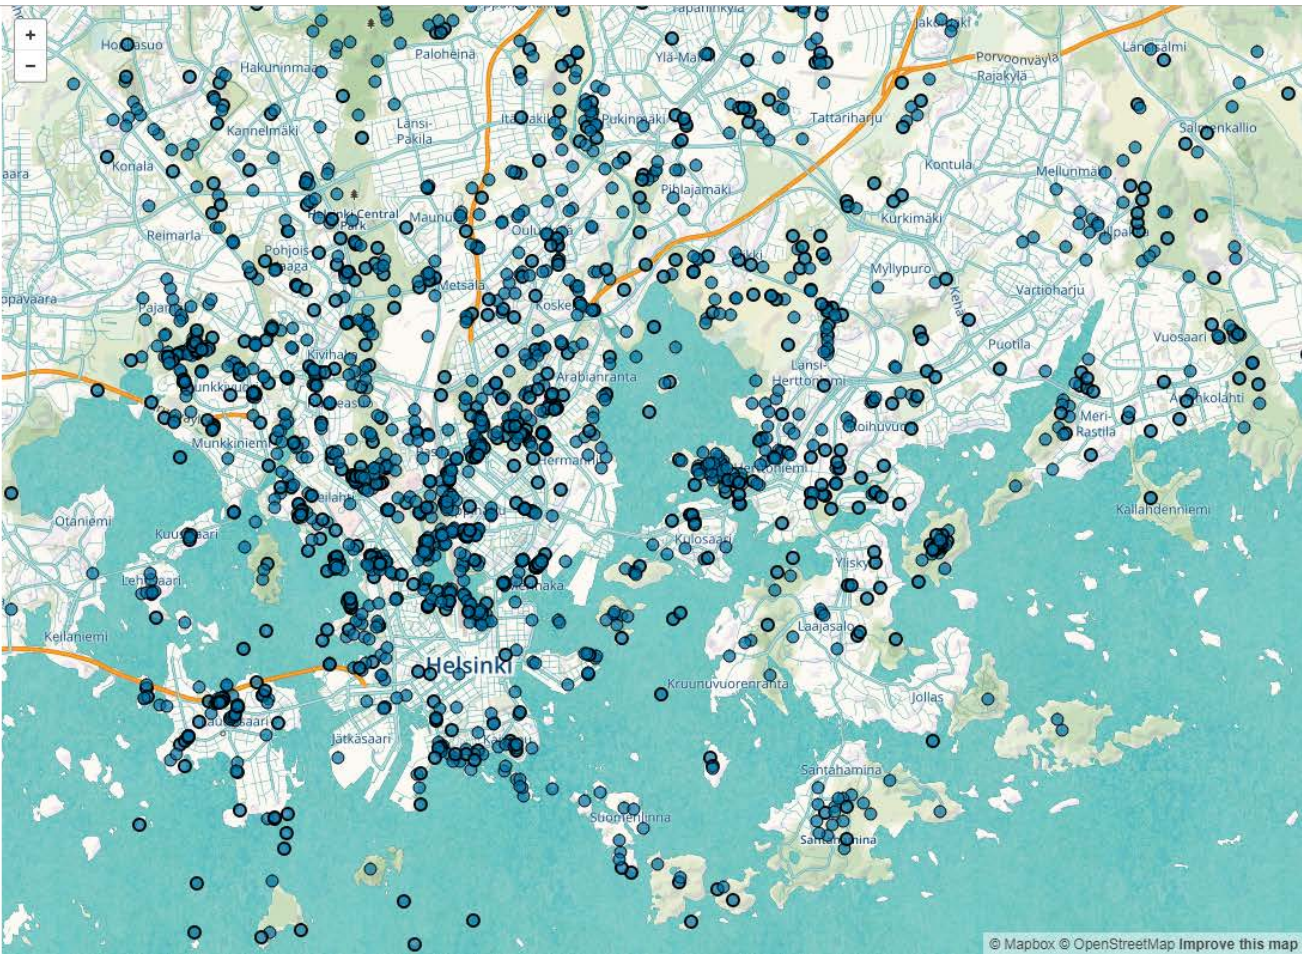

The results of the Helsinki 2050 map survey

Suomeksi

With this tool, you can review the material of the city plan map survey. The material available to you includes responses from approximately 4,700 city residents and 33,000 locations indicated on the map. The survey was open 4 November–9 December 2013 and it was executed by Mapita Inc. The survey collected the views of city residents for the preparation of Helsinki's new city plan. Read more at www.yleiskaava.fi.

- ☐ A place or area for residential building
- ☐ A street side that could be built up
- ☐ A plaza or square that is too large, whose surroundings could be built up
- ☒ The area is not necessary for recreation, it could be built up
- ☐ A place for offices, services or business premises
- ☐ There should be more shops and services here on the street-level floors of the buildings
- ☐ Recreationally important, but could be of better quality
- ☐ This area is unique city nature just as it is
- ☐ The environment around here looks dreary and should be improved by planting trees, for example
- ☐ A poorly managed / undefined area that should be improved
- ☐ My completely new idea
- ☐ There should be a pedestrian street here
- ☐ Public transport connection
- ☐ Cycling connection
- ☐ Walking connection
- ☐ Car transport connection
